

Steve Troxel is a capable, hands on business leader with over 18 years of experience in large public sector organizations, Fortune 100 corporations, and emerging growth companies. His early experiences both as an individual contributor and manager on projects at Boeing, American Express, and United Healthcare provided him with working knowledge on how to best leverage strong project methodologies and team dynamics to achieve positive business results in large organizations. He has been able to successfully harness this knowledge to become an asset to organizations seeking change.

As a founder of IT Partners in Arizona in 2003, Steve was instrumental in growing the firm to over \$21 million in under 3 years with no debt and very limited upfront investment. Steve worked as both a Principal Consultant in the field with customers as well as the VP of Product Development. The field experience provided firsthand knowledge of how to innovate and provide customers with the experiences they craved, and was an essential aspect of product development in a rapidly evolving industry.

Steve was brought onboard by the ownership of Element Payment Services in 2008 to help take an innovative internally developed payment card processing software asset and extend it to the US market. Steve successfully architected, designed, and implemented the infrastructure and assembled the IT operations team needed to securely and reliably deploy the software while able to continually meet stringent PCI security requirements. The software asset and its delivery infrastructure were the heart of the value of the company when it was acquired by Vantiv in 2013 for over \$170 million.

In 2010 Steve began his position as the President and CEO of Prencipia, Inc.. Steve successfully transformed the energy services consulting firm into a data center systems integrator. Equally comfortable in the board room and as a technical contributor within project teams, Steve is able to not only see the big picture but can also dive into the technical details. This provides insights to help organizations make rapid changes while mitigating risks. This skill was essential when Steve worked directly with the Arizona Governor's Office in 2010 to address a data center challenge that placed the core systems at the Arizona Department of Education and over \$5 billion dollars of annual federal funding at risk. Steve was instrumental in stabilizing the systems to not only mitigate risks but to improve the platform's reliability and performance.

As the Chair of the Maricopa Workforce Development Board, Steve would like to use his business experiences to lead the board and Maricopa Workforce Connections in improving our ability to meet the needs of the community.

Steve lives in Scottsdale with his wife Brooke and their two sons, Nathaniel and Brennan.
